CARE AND CLEANING INSTRUCTIONS

Natural Quartz Surfacing

Your Tower Industries Natural Quartz Surfacing has been fabricated by skilled craftsman using premium quality tools and materials. You can protect the beauty of your quartz surface and ensure a long life of trouble-free service by observing the following suggestions.

GENERAL CARE AND CLEANING

Quartz surfaces are easy to clean using warm water and any pH neutral, non-abrasive cleaner such as Formula 409[®] or Simple Green[®], with a clear water rinse.

The following chemicals may be used with caution to remove difficult spots or spills from your Tower Industries Quartz Surfacing:

Ammonia	Lysol [®] Cleaners	Rubbing Alcohol
Glass Cleaners containing Ammonia	Vinegar	

Caution should be exercised in the use, handling, or storage of any of the above chemicals or products.

Certain chemical substances can seriously mar your product's finish, even during brief periods of contact. Protect your Tower Industries Quartz Surfacing from these harmful compounds:

Clorox [®] and other Hydrochlorite Bleaches	Oven Cleaner (or any other alkaline cleaners)
Comet [®] (or any other abrasive cleaners)	Tarnish Removers and Silver Cleaners
S.O.S. [®] Pads and all similar abrasive products	Paint Strippers containing Methylene Chloride
Soft Scrub [®] (or any other product containing pumice)	

DO NOT apply any sealers, waxes, penetrants, or other topical treatments to your Tower Industries Quartz Surfacing under any circumstances.

GENERAL INFORMATION

1. Quartz Surfacing is composed primarily of pure, natural quartz. Variations in the natural color, pattern, size, shape, and shade of the quartz crystals are inherent and unique characteristics to be expected with this product. These variations do not affect the product performance in any manner. Your product will not be replaced due to these variations.
2. Quartz surfacing is structurally more resistant to surface damage than natural stone. However, all stone and quartz surfaces can be damaged by excessive force or pressure.
3. Quartz Surfacing is not a seamless product. Seams will be visible. Product pattern and shade may change at any seam.
4. Quartz surfaces can be damaged by sudden and rapid temperature changes, especially near the edges, as well as direct or sustained heating of the product. Your quartz surface may not withstand the direct transfer of heat from hot pots and pans, electric frying pans and griddles, some crock pots, some toasters and toaster ovens, and heat lamps. Therefore, the use of a hot pad or trivet is ALWAYS recommended.
5. Continuous, long-term exposure to direct sunlight (UV Rays) will result in discoloration of your quartz surfacing. This will not apply for most indoor applications.

Your Tower Industries Quartz Surfacing is truly a work of art. With a minimum amount of care, its beauty and durability may be maintained for many years.

THANK YOU FOR YOUR BUSINESS !
